6-G-9	An additional* supply of dantrolene/Ryanodex and diluents are stored in the facility, or the facility has a written agreement with another source that will provide additional* dantrolene/Ryanodex and diluents on a STAT basis within 15 minutes for continued treatment and stabilization of a patient experiencing a MH episode. *Additional supply of dantrolene is defined as: Dantrium®/Revonto® - 24 vials (20 mg/vial) Ryanodex® - 2 vial (250 mg/vial)	6-G-9	If a facility uses depolarizing agents, an additional* supply of dantrolene/Ryanodex and diluents are stored in the facility, or the facility has a written agreement with another source that will provide additional* dantrolene/Ryanodex and diluents on a STAT basis within 10 minutes for continued treatment and stabilization of a patient experiencing a MH episode. *Additional supply of dantrolene is defined as: Dantrium®/Revonto® - 24 vials (20 mg/vial) Ryanodex® - 2 vial (250 mg/vial)
6-G-10	Flow sheets for any MH intervention as well as forms to rapidly communicate progress of intervention with receiving facilities are on the emergency cart and all facilities must document and report any "adverse metabolic or musculoskeletal reaction to anesthesia". This documentation must be transportable with the patient when transferred to receiving facility.	6-G-10	If a facility uses depolarizing agents, flow sheets for any MH intervention as well as forms to rapidly communicate the progress of intervention with receiving facilities are on the emergency cart, and the facility must document and report any "adverse metabolic or musculoskeletal reaction to anesthesia". This documentation must be transportable with the patient when transferred to the receiving facility.
6-G-12	The malignant hyperthermia algorithms must be available on the emergency cart.	6-G-11	Facilities must have a policy for MH transfer including EMS 911 transport to a facility capable of ongoing treatment located within a reasonable distance. A healthcare professional with the ability to continue MH treatment must accompany the patient during transport and provide a report to the receiving facility staff.
7-A-4	Scrub suits, caps or hair covers, gloves, operative gowns, masks, eye protection, and all other appropriate personal protective equipment is used for all appropriate procedures.	7-A-10	The facility's policies address operating/procedure room apparel. This includes: scrub suits, caps or hair covers, gloves, operative gowns, masks, eye protection, and all other appropriate apparel based on the procedure being conducted.
7-A-5	A sterile field is used during all operations.	7-A-11	A sterile field is used during all operations and procedures, as applicable.
7-A-12	The facility staff must have knowledge of infection control techniques.		No Change
7-A-14	Policy and practices exist to prevent and control infections such as: proper use of antibiotics, hand washing, prevention of site infection, and infection event reporting.	7-A-14	Policy and practices exist to prevent and control infections such as: proper use of antibiotics, hand hygiene , prevention of site infection, and infection event reporting.

International Change Report

QUAD A Previous Version 4.2		Revised Standards - Version 5	
Number	Language	Number	Language
7-A-15	Aseptic techniques are maintained during procedures and between cases.		No Change
7-B-3	Appropriate scrub facilities are provided for the operating room staff.	7-B-1	Hand hygiene is performed in accordance with current nationally recognized and/or WHO guidelines and standards of practice. Periodic hand hygiene auditing must be a part of the facility's quality activities. For surgical/procedural facilities: Scrub facilities are provided for the operating room staff. Scrub products (as appropriate), soap, and alcohol cleansers are provided for the operating room staff, consistent with current adopted guidelines and standards of practice for hand hygiene.
N/A	No current requirement.	7-C-1	The facility has a written protocol for the reprocessing of all instruments and disinfection of all equipment used in patient care consistent with the manufacturer's instructions for use.
7-C-2	There is strict segregation of dirty surgical equipment and instruments that have been cleaned and are in the preparation and assembly area.		No Change
7-C-3	The instrument preparation and assembly area (clean utility area) is separated by walls or space from the instrument cleaning area (dirty utility area) or, there is a policy to clean and disinfect the dirty utility area before preparing and assembling packs for sterilization.	7-C-3	The instrument preparation and assembly area (clean processing area) are separated by walls or space from the instrument cleaning and decontamination area (reprocessing area).
7-C-4	If one sink is used both for dirty instruments and to hand/arm scrub for procedures, there is a written policy to clean and disinfect the sink prior to hand/arm scrubbing.	7-C-4	Single-use devices are not reprocessed unless they are approved by the FDA for reprocessing. Reprocessing of these devices is done by an FDA-approved reprocessor.
7-D-1	All instruments used in patient care are sterilized, where applicable.		No Change
